

Farmweld EuroStyle™ Farrowing Crate.

Durable. Productive. Versatile.

A low back and four-bolt, convenient assembly are just two features of the new Farmweld EuroStyle Farrowing Crate.

low back and four-bolt, convenient assembly

European styled, low back makes it easy for the farrowing room crew to access the sow and baby pigs. Height at the back of the crates is 25 inches (63.5 cm) from floor so workers can reach for pigs without having to climb over or open gates.

Pig Saver Flip Bars are welded at the factory so there's no added installation at the farm. Pig Saver Flip Bars — with no sharp edges — ensure the sow eases herself down slowly to protect pigs but the bars won't restrict the sow as she's getting back up.

Swinging Rump Guard gates open forward and backward so that workers have excellent access for scraping behind the sow or assisting during farrowing even when sow is right next to the gate.

Quick-release back gate is easy to manipulate quickly with just one hand. Non-removable pins won't get dropped or misplaced.

Four-bolt assembly reduces installation time and hassle.

Solid rod construction is important for durability.

Finger or bow bar options are available. The Farmweld EuroStyle Farrowing Crate is slightly longer (1.5"/3.8 cm) than standard crate models.

Heavy Duty Solid End Dividers or Corrugated Stainless Steel Dividers are available as added options.

Clipless card holder prevents sows from removing cards. Fits standard sow record cards.

Swinging heat lamp rod positions heat where it is needed.

The durable Modular Cast Center Platform, with fiberglass beams, provides a cool and comfortable surface for the sow. Pigs stay warm on Farmweld plastic panels which interlock into the cast sections. For more information about the platform, visit www.farmweld.com or call 1-800-EAT-PORK.
